Role: software developer/full stack developer

Role: accountant/financial analyst.

ABOUT ME

A pragmatic and enthusiastic software developer with particular emphasis on backend with django and python,c# but also conversant with frontend technologies html,css, javascript,bootstrap ,mysql and other database technologies. A financial analyst with advanced accounting and finance skills,that i use to develop enterprise softwares.Kindly visit my website to view my projects in the mentioned languages.

WORK EXPERIENCE

04/2019 - present

Freelance software development: Individual projects.

1.After finishing my contract at my previous company ,I decided to learn programming and software development from youtube channels,freecodecamp and got certifications from udey. From the knowledge I acquired,I developed a software as a service web application point of sale with integrated accounting financial reporting that is being used by small businesses.The system handles sales ,purchases and expenses and reports profit or loss at the end of the month.I used Django,javascript and mysql database.The link of the project is in my website under projects.The system is being used by small businesses like hotels,clinics and shops.

2.Currently ,am developing a sacco and chama management cloud based system .Having worked in a sacco ,specifically one geared towards chamas,I saw a lot of processes ,especially the accounting and reporting which were being done manually can be automated.I believe the system can be a success.

04/2015 - 04/2019

Business development officer:Social economic integrated organization

Responsibilities:

- Maintaining the office accounting system and the database.
- Preparing financial statements and financial reporting.
