Role: software developer

Role: Accountant

Role: Finance officer

ABOUT ME

A pragmatic and enthusiastic software developer with particular emphasis on backend with django and python,c# but also conversant with frontend technologies html,css, javascript,bootstrap ,mysql and other database technologies. A financial analyst and accountant with advanced accounting and finance skills,that i use to develop enterprise softwares.Kindly visit my website to view projects in the mentioned languages.

WORK EXPERIENCE

04/2019 - present

Software development: Projects.

1.After finishing my contract at my previous company ,I decided to learn programming and software development from youtube channels,freecodecamp and got certifications from udemy since it's always been a passion for me.From the knowledge I gained,I was able to develop a web based point of sale that is currently being used by small businesses.The system handles all transactions accurately and produces the necessary reports and its fully integrated with mpesa ecosystem.I used Django,javascript,mysql database, mpesa daraja api and made the site into a progressive web application to be installed on any smartphone or pc.The link of the project is in my website under projects.

2.Currently ,am developing a lending and chama management cloud based system .Having worked in a sacco ,specifically one geared towards chamas,I saw a lot of processes especially the accounting and reporting which were being done manually could be automated.I believe the system will be a success.The system is currently being used by some microfinances like provida Africa limited ,a lending company in thika.

04/2015 - 04/2019

Business development officer:Social economic integrated organization

Responsibilities:

- Maintaining the office accounting system and the database.
